

# Automate Project Creation

## The Requirement

The client wanted the ability to regularly create a new project with identical items such as schemes, role memberships, custom field configurations and issues. However, they did not want to go through the time consuming task of duplicating each manually.

## Our Role

We proposed the client should copy a blank original project using the **ScriptRunner for Jira** built-in script '**copy project**', thus creating a new blank project every time.

## The Outcome

Now the client can quickly copy a project and all its dependencies without error, compared to the hours of effort it would have taken manually.
