Notifications for Confluence

Notifications for Confluence enables your Confluence users and teams to keep up to date with changes to Pages, Spaces and News items that are important to them.

With Notifications for Confluence you can:

- Subscribe whole groups of Confluence users to news updates – great for company newsletters
- Follow entire page trees with a single click
- Optionally watch any new pages that are added to the hierarchy
- Manually override and choose which pages to not to watch in the hierarchy
- Manage all notifications from your profile
- Watch all news posted to a space and easily subscribe to your favourite Confluence bloggers

You can also view Notifications for Confluence on our [Adaptavist website](#) .

Compatibility

- The latest compatible version right now is version 1.2.2 compatible with Confluence versions 5.6 - 5.9.1 (Data centre Compatibility Confluence 5.6- 5.8 versions)
- You can always check the compatibility for other version of Confluence from the [Atlassian Marketplace](#)

Installation

Notifications for Confluence is available for installation from the Atlassian Marketplace, using Confluence Server Administration > Universal Plugin Manager (UPM), or by download from the [Atlassian Marketplace](#) .

Plugin Licensing

Notifications for Confluence is a commercial plugin licensed via Atlassian through the [Universal Plugin Manager](#) (UPM).

Plugin Support

We offer plugin related support, [Product Support Service Level Agreement \(SLA\)](#) for Adaptavist Products and Plugins.

Documentation

- The [Notifications for Confluence documentation for newer Confluence versions \(5.2.x onwards \)](#)
- The [Notifications for Confluence documentation for previous Confluence versions \(5.0.x and 5.1.x\)](#)

Frequently Asked Questions on Notifications for Confluence

If you need more explanation or have any other questions then please [contact us](#).

▼ [What is the difference between Descendant Notifications and Enterprise Notifications?](#)

The Descendant Notifications and Notifications for Confluence plugin are the same plugin but Notifications for Confluence plugin was redesigned to accommodate the Confluence 5 changes. Hence Descendant Notifications is for versions before Confluence 5

▼ [How to migrate from Descendants Notifications to Enterprise Notifications](#)

The general, recommended way of upgrading a Confluence is to uninstall the plugins before the upgrade, and once the upgrade is finished, re-installing it back. In this case, uninstall the Descendant Notifications, upgrade the Confluence instance and then install the Notifications for Confluence.

If you have unknowingly installed both plugins in your instance at the same time, We suggest to uninstall both plugins and then clear the plugin cache. Here you can find the [instructions](#) . After that, please install only the Notifications for Confluence and do the rebuild in Confluence Administration site / Notification for Confluence menu.

▼ [What does rebuilding do?](#)

In older versions,

The rebuilding was provided so that users migrating from Confluence 4 versions to Confluence 5 could migrate the data from Descendant Notifications to Notifications for Confluence plugin. In order to use the plugin, rebuilding the data functions is provided, so the menu elements, which were not displayed could appear. This is needed to be done only once.

In newer versions,

In the next version of the plugin we will separate this and check automatically, if there was Descendant Notification plugin installed formerly, therefore the rebuild will be not needed for those users who were not using Descendant Notification plugin.

▼ [How to Turn off Google Analytics](#)

Google Analytics has been embedded in Notifications for Confluence in v.1.2.4. Please see our documentation for information on turning off google analytics : [Turning off Google Analytics](#)
