Page Information Tools

The Page Information Tools plugin allows you to display the various bits of information about pages and blog posts in Confluence that are usually hidden away. By combining macros together, you can show things like who created the page and when or the current version number and date it was last modified. It's particularly useful when working with custom themes, like Theme Builder, or formal documentation.

You can also view Page Information Tools Plugin on our [Adaptavist website](#) .

Compatibility

- The latest compatible version right now is version 3.2.3 compatible with Confluence versions 5.6- 5.9 (Data centre Compatibility Confluence 5.6- 5.8 versions)
- You can always check the compatibility for other version of Confluence from the [Atlassian Marketplace](#)

Installation

Page Information Tools is available for installation from the Atlassian Marketplace, using Confluence Server Administration > Universal Plugin Manager (UPM), or by download from the [Atlassian Marketplace](#) .

Plugin Licensing

Page Information Tools is a free plugin, so can install the [Free License](#) to your installation using the [Plugin Licensing Manager](#) (only until v.3.0) from v.3.1 it doesn't require licensing

Documentation
